EE25BTECH11019 - Darji Vivek M.

Question:
If $\mathbf{a} = \mathbf{i} + \mathbf{j} + \mathbf{k}$, $\mathbf{a} \cdot \mathbf{b} = 1$ and $\mathbf{a} \times \mathbf{b} = \mathbf{j} - \mathbf{k}$, then $\mathbf{b}$ is

(a) $\mathbf{i} - \mathbf{j} + \mathbf{k}$
(b) $2\mathbf{j} - \mathbf{k}$
(c) $\mathbf{i}$
(d) $2\mathbf{i}$

Solution:

$$\mathbf{a} = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}, \quad \mathbf{b} = \begin{pmatrix} x \\ y \\ z \end{pmatrix} \tag{1}$$

Dot product condition:

$$x + y + z = 1 \tag{2}$$

Cross product condition gives

$$z - y = 0, \quad x - z = 1, \quad y - x = -1 \tag{3}$$

The first equation can be expressed as

$$\begin{pmatrix} 0 & 1 & -1 \end{pmatrix} \begin{pmatrix} x \\ y \\ z \end{pmatrix} = 0 \tag{4}$$

Collecting all equations:

$$\begin{pmatrix} 0 & 1 & -1 \\ 1 & 0 & -1 \\ 1 & 1 & 1 \end{pmatrix} \begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} 0 \\ 1 \\ 1 \end{pmatrix} \tag{5}$$

Solving,

$$\begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix} \tag{6}$$

Hence,

$$\mathbf{b} = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix} = \mathbf{i} \tag{7}$$

Therefore, the correct option is (c).
