Question:
The position vector of the point which divides the join of points $2\mathbf{a}-3\mathbf{b}$ and $\mathbf{a}+\mathbf{b}$ in the ratio 3 : 1 is _____.
Solution:

$$P = 2\mathbf{a} - 3\mathbf{b} = \begin{pmatrix} 2a \\ -3b \end{pmatrix}, \tag{0.1}$$

$$Q = \mathbf{a} + \mathbf{b} = \begin{pmatrix} a \\ b \end{pmatrix}. \tag{0.2}$$

Using section formula, the point R dividing PQ in ratio 3 : 1 is

$$R = \frac{3Q + 1P}{3+1}. \tag{0.3}$$

$$R = \frac{1}{4}\left(3\begin{pmatrix} a \\ b \end{pmatrix} + \begin{pmatrix} 2a \\ -3b \end{pmatrix}\right) \tag{0.4}$$

$$= \frac{1}{4}\begin{pmatrix} 3a + 2a \\ 3b - 3b \end{pmatrix} \tag{0.5}$$

$$= \frac{1}{4}\begin{pmatrix} 5a \\ 0 \end{pmatrix} \tag{0.6}$$

$$= \begin{pmatrix} \frac{5a}{4} \\ 0 \end{pmatrix}. \tag{0.7}$$

$$\boxed{R = \begin{pmatrix} \frac{5a}{4} \\ 0 \end{pmatrix}} \tag{0.8}$$

Let a=1 and b=0.
