Question

If the distance of the point $(1, 1, 1)$ from the plane $x - y + z + \lambda = 0$ is $\frac{5}{\sqrt{3}}$, find the value(s) of λ.

Solution

Equation of plane is given by

$$n^\top x = -\lambda; \tag{1}$$

where $n^\top = \begin{pmatrix} 1 & -1 & 1 \end{pmatrix}$.

Solution

Let the distance of point P(1,1,1) from the plane is d.

$$d = \frac{||n^\top P + \lambda||}{||n||} \tag{2}$$

then value of λ is given by

$$\lambda = +d||n|| - n^\top P \text{ or} \tag{3}$$

$$\lambda = -d||n|| - n^\top P \tag{4}$$

Solving these Equations we get

$$\implies \lambda = +4 \tag{5}$$

$$= -6 \tag{6}$$
