Question:

Point $P(x, 4)$ lies on the line segment joining the points $A(-5, 8)$ and $B(4, -10)$. Find the ratio in which point P divides the line segment AB . Also, find the value of x .

Solution:

Let

$$\mathbf{A} = \begin{pmatrix} -5 \\ 8 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 4 \\ -10 \end{pmatrix}$$

Let $\mathbf{P} = \lambda\mathbf{A} + \mu\mathbf{B}$ with $\lambda + \mu = 1$. Using the y-coordinates:

$$\begin{pmatrix} 8 & -10 \\ 1 & 1 \end{pmatrix} \begin{pmatrix} \lambda \\ \mu \end{pmatrix} = \begin{pmatrix} 4 \\ 1 \end{pmatrix} \quad (0.1)$$

Hence the internal division ratio

$$AP : PB = \mu : \lambda = 2 : 7 \quad (0.2)$$

and

$$x = \lambda(-5) + \mu(4) = -\frac{35}{9} + \frac{8}{9} = -3 \quad (0.3)$$

So, $\mathbf{P} = (-3, 4)$
