AI25BTECH11033–SNEHAMRUDULA

If the point  $P(2, 1)$  lies on the line segment joining points  $A(4, 2)$  and  $B(8, 4)$ , then

1)  $AP = \frac{1}{4}AB$

2)  $AP = PE$

3)  $PB = \frac{1}{3}AB$

4)  $AP = \frac{3}{5}AB$

**Solution:**

$$\mathbf{A} = \begin{pmatrix} 4 \\ 2 \end{pmatrix}, \quad \mathbf{B} = \begin{pmatrix} 8 \\ 4 \end{pmatrix}, \quad \mathbf{P} = \begin{pmatrix} 2 \\ 1 \end{pmatrix}. \quad (4.1)$$

$$\mathbf{AB} = \mathbf{B} - \mathbf{A} = \begin{pmatrix} 8 \\ 4 \end{pmatrix} - \begin{pmatrix} 4 \\ 2 \end{pmatrix} = \begin{pmatrix} 4 \\ 2 \end{pmatrix}, \quad (4.2)$$

$$\mathbf{AP} = \mathbf{P} - \mathbf{A} = \begin{pmatrix} 2 \\ 1 \end{pmatrix} - \begin{pmatrix} 4 \\ 2 \end{pmatrix} = \begin{pmatrix} -2 \\ -1 \end{pmatrix}. \quad (4.3)$$

$$\|\mathbf{AB}\|^2 = 4^2 + 2^2 = 20, \quad (4.4)$$

$$\|\mathbf{AP}\|^2 = (-2)^2 + (-1)^2 = 5. \quad (4.5)$$

$$\left(\frac{AP}{AB}\right)^2 = \frac{\|\mathbf{AP}\|^2}{\|\mathbf{AB}\|^2} = \frac{5}{20} = \frac{1}{4} \Rightarrow \frac{AP}{AB} = \frac{1}{2}. \quad (4.6)$$

$AP = \frac{1}{2} AB$
