Question

A variable plane at a distance of one unit from the origin cuts the coordinate axes at A, B and C .

If the centroid $D(x, y, z)$ of triangle ABC satisfies the relation

$$\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2} = k,$$

then the value of k is :

1) 3

3) $\frac{1}{3}$

2) 1

4) 9

Solution

Let the plane meet the coordinate axes at

$$\mathbf{A} = \begin{pmatrix} a \\ 0 \\ 0 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 0 \\ b \\ 0 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} 0 \\ 0 \\ c \end{pmatrix}.$$

Define

$$M = \text{diag}(a, b, c), \quad e = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}.$$

The normal vector of the plane is given by

$$n = M^{-1}e = \begin{pmatrix} \frac{1}{a} \\ \frac{1}{b} \\ \frac{1}{c} \end{pmatrix} \quad (4.1)$$

The squared norm of the normal vector is

$$\|n\|^2 = e^T M^{-2} e = \frac{1}{a^2} + \frac{1}{b^2} + \frac{1}{c^2} \quad (4.2)$$

The perpendicular distance of the plane from the origin is

$$d = \frac{|1|}{\|n\|} = \frac{1}{\sqrt{e^T M^{-2} e}} \quad (4.3)$$

Thus, the relation between a, b, c and d is

$$e^T M^{-2} e = \frac{1}{d^2} \quad (4.4)$$

The centroid of the triangle ABC is

$$D = \frac{1}{3} \begin{pmatrix} a \\ b \\ c \end{pmatrix} = \frac{1}{3} M e \quad (4.5)$$

Hence, the coordinates of the centroid are

$$x = \frac{a}{3}, \quad y = \frac{b}{3}, \quad z = \frac{c}{3} \quad (4.6)$$

Now, the required expression is

$$\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2} = \frac{1}{(a/3)^2} + \frac{1}{(b/3)^2} + \frac{1}{(c/3)^2} \quad (4.7)$$

Simplifying, we get

$$\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2} = 9 \left(\frac{1}{a^2} + \frac{1}{b^2} + \frac{1}{c^2} \right) \quad (4.8)$$

In matrix form, this becomes

$$\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2} = 9 e^T M^{-2} e \quad (4.9)$$

Using the relation obtained earlier,

$$\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2} = \frac{9}{d^2} \quad (4.10)$$

For $d = 1$, we finally obtain

$$\frac{1}{x^2} + \frac{1}{y^2} + \frac{1}{z^2} = 9 \quad (4.11)$$

$$\boxed{k = 9}$$
