Question:

Prove that the line through $A(0, -1, -1)$ and $B(4, 5, 1)$ intersects the line through $C(3, 9, 4)$ and $D(-4, 4, 4)$.

Solution:

Matrix Method:

$$\mathbf{A} = \begin{pmatrix} 0 \\ -1 \\ -1 \end{pmatrix}, \quad \mathbf{B} = \begin{pmatrix} 4 \\ 5 \\ 1 \end{pmatrix}, \quad \mathbf{C} = \begin{pmatrix} 3 \\ 9 \\ 4 \end{pmatrix}, \quad \mathbf{D} = \begin{pmatrix} -4 \\ 4 \\ 4 \end{pmatrix}, \quad (1)$$

$$\mathbf{d}_1 = \mathbf{B} - \mathbf{A} = \begin{pmatrix} 4 \\ 6 \\ 2 \end{pmatrix}, \quad \mathbf{d}_2 = \mathbf{D} - \mathbf{C} = \begin{pmatrix} -7 \\ -5 \\ 0 \end{pmatrix}, \quad (2)$$

$$\mathbf{P}(\lambda) = \mathbf{A} + \lambda \mathbf{d}_1, \quad \mathbf{Q}(\mu) = \mathbf{C} + \mu \mathbf{d}_2, \quad (3)$$

$$\mathbf{P}(\lambda) = \mathbf{Q}(\mu) \implies \lambda \mathbf{d}_1 - \mu \mathbf{d}_2 = \mathbf{C} - \mathbf{A}, \quad (4)$$

$$\mathbf{C} - \mathbf{A} = \begin{pmatrix} 3 \\ 10 \\ 5 \end{pmatrix}. \quad (5)$$

Component form:

$$4\lambda + 7\mu = 3, \quad 6\lambda + 5\mu = 10, \quad 2\lambda = 5. \quad (6)$$

Solving:

$$\lambda = \frac{5}{2}, \quad \mu = -1. \quad (7)$$

Intersection point:

$$\mathbf{P}\left(\frac{5}{2}\right) = \begin{pmatrix} 0 \\ -1 \\ -1 \end{pmatrix} + \frac{5}{2} \begin{pmatrix} 4 \\ 6 \\ 2 \end{pmatrix} = \begin{pmatrix} 10 \\ 14 \\ 4 \end{pmatrix}, \quad (8)$$

$$\mathbf{Q}(-1) = \begin{pmatrix} 3 \\ 9 \\ 4 \end{pmatrix} + (-1) \begin{pmatrix} -7 \\ -5 \\ 0 \end{pmatrix} = \begin{pmatrix} 10 \\ 14 \\ 4 \end{pmatrix}. \quad (9)$$

Therefore, the lines intersect at $\begin{pmatrix} 10 \\ 14 \\ 4 \end{pmatrix}$.
