Question:

The position vector of the point which divides the join of points $2\mathbf{a} - 3\mathbf{b}$ and $\mathbf{a} + \mathbf{b}$ in the ratio 3 : 1 is _____.

Solution:

$$P = 2\mathbf{a} - 3\mathbf{b} = \begin{pmatrix} 2 \\ -3 \end{pmatrix}, \quad (0.1)$$

$$Q = \mathbf{a} + \mathbf{b} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}. \quad (0.2)$$

Using section formula, the point R dividing PQ in ratio 3 : 1 is

$$R = \frac{3Q + 1P}{3 + 1}. \quad (0.3)$$

$$R = \frac{1}{4} \left(3 \begin{pmatrix} 1 \\ 1 \end{pmatrix} + \begin{pmatrix} 2 \\ -3 \end{pmatrix} \right) \quad (0.4)$$

$$= \frac{1}{4} \begin{pmatrix} 3 + 2 \\ 3 - 3 \end{pmatrix} \quad (0.5)$$

$$= \frac{1}{4} \begin{pmatrix} 5 \\ 0 \end{pmatrix} \quad (0.6)$$

$$= \begin{pmatrix} \frac{5}{4} \\ 0 \end{pmatrix}. \quad (0.7)$$

$$\boxed{R = \begin{pmatrix} \frac{5}{4} \\ 0 \end{pmatrix}} \quad (0.8)$$
