Question: \mathbf{AD} is a median of triangle ABC with vertices $A \begin{pmatrix} 5 \\ -6 \end{pmatrix}$, $B \begin{pmatrix} 6 \\ 4 \end{pmatrix}$, and $C \begin{pmatrix} 0 \\ 0 \end{pmatrix}$. Find the length of \mathbf{AD} .

Solution: $\mathbf{A} = \begin{pmatrix} 5 \\ -6 \end{pmatrix}$ $\mathbf{B} = \begin{pmatrix} 6 \\ 4 \end{pmatrix}$ $\mathbf{C} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$

\mathbf{D} is the midpoint of \mathbf{BC} .

$$\mathbf{D} = \frac{\mathbf{B} + \mathbf{C}}{2} \quad (0.1)$$

$$= \frac{1}{2} \left(\begin{pmatrix} 6 \\ 4 \end{pmatrix} + \begin{pmatrix} 0 \\ 0 \end{pmatrix} \right) \quad (0.2)$$

$$= \frac{1}{2} \begin{pmatrix} 6 \\ 4 \end{pmatrix} \quad (0.3)$$

$$= \begin{pmatrix} 3 \\ 2 \end{pmatrix} \quad (0.4)$$

$$\mathbf{AD} = \mathbf{D} - \mathbf{A}$$

$$\mathbf{AD} = \begin{pmatrix} 3 \\ 2 \end{pmatrix} - \begin{pmatrix} 5 \\ -6 \end{pmatrix} \quad (0.5)$$

$$= \begin{pmatrix} -2 \\ 8 \end{pmatrix} \quad (0.6)$$

Length of \mathbf{AD} is $\|\mathbf{AD}\|$.

$$\|\mathbf{AD}\| = \sqrt{\mathbf{AD}^T \mathbf{AD}} \quad (0.7)$$

$$\|\mathbf{AD}\| = \sqrt{(-2)^2 + (8)^2} \quad (0.8)$$

$$= \sqrt{4 + 64} \quad (0.9)$$

$$= \sqrt{68} \quad (0.10)$$

$$= 2\sqrt{17} \quad (0.11)$$
