

## Problem 1.4.25

EE25BTECH11009 – Anshu Kumar Ram

August 30, 2025

# Question

**Find the position vector of a point  $R$  which divides the line joining two points  $P$  and  $Q$  whose position vectors are  $2\mathbf{a} + \mathbf{b}$  and  $\mathbf{a} - 3\mathbf{b}$  externally in the ratio  $1 : 2$ .**

# Solution Step 1

**Step 1: Represent points in coordinates**

$$P = 2\mathbf{a} + \mathbf{b} = \begin{pmatrix} 2 \\ 1 \end{pmatrix},$$

$$Q = \mathbf{a} - 3\mathbf{b} = \begin{pmatrix} 1 \\ -3 \end{pmatrix}.$$

## Step 2: Apply section formula (external division)

$$\begin{aligned} R &= \frac{1 \cdot Q - 2 \cdot P}{1 - 2} \\ &= \frac{1}{-1} \left( \begin{pmatrix} 1 \\ -3 \end{pmatrix} - 2 \begin{pmatrix} 2 \\ 1 \end{pmatrix} \right) \\ &= - \begin{pmatrix} -3 \\ -5 \end{pmatrix} \\ &= \begin{pmatrix} 3 \\ 5 \end{pmatrix}. \end{aligned}$$

$$\boxed{R = 3\mathbf{a} + 5\mathbf{b}}$$
