Question

Q. Find the angle between unit vectors **a** and **b** such that $\sqrt{3}\mathbf{a} - \mathbf{b}$ is also a unit vector.

Solution

Solution. Let

$$\mathbf{a} = \begin{pmatrix} a_1 \\ a_2 \\ a_3 \end{pmatrix}, \quad \mathbf{b} = \begin{pmatrix} b_1 \\ b_2 \\ b_3 \end{pmatrix}, \quad \mathbf{a}^\top \mathbf{a} = \mathbf{b}^\top \mathbf{b} = 1.$$

If $\sqrt{3}\mathbf{a} - \mathbf{b}$ is a unit vector, then

$$1 = \|\sqrt{3}\mathbf{a} - \mathbf{b}\|^2 = (\sqrt{3}\mathbf{a} - \mathbf{b})^\top (\sqrt{3}\mathbf{a} - \mathbf{b}) = 3\mathbf{a}^\top \mathbf{a} + \mathbf{b}^\top \mathbf{b} - 2\sqrt{3}\mathbf{a}^\top \mathbf{b}.$$

Hence

$$4 - 2\sqrt{3}(\mathbf{a}^\top \mathbf{b}) = 1 \implies \mathbf{a}^\top \mathbf{b} = \frac{\sqrt{3}}{2}.$$

Let θ be the angle between \mathbf{a} and \mathbf{b} ; $\cos \theta = \mathbf{a}^\top \mathbf{b}$, so

$$\cos \theta = \frac{\sqrt{3}}{2} \implies \boxed{\theta = 30^\circ}.$$

Plot

2D Illustration (xy-projection): Parallelogram spanned by \vec{a} and \vec{b}

$$|\vec{a} \times \vec{b}| = 22.517 (= 13\sqrt{3})$$

Figure: xy-projection of \mathbf{a} and \mathbf{b} ; $|\mathbf{a} \times \mathbf{b}| = 13\sqrt{3}$.
