Question: Find the equation of the plane which passes through the point (5,2,-4) and perpendicular the line with direction ratios 2,3,-1.

Solution: let the equation of the plane be

$$\mathbf{n}^T \mathbf{x} = c \quad (0.1)$$

as per the question, $\mathbf{n} = \begin{pmatrix} 2 \\ 3 \\ -1 \end{pmatrix}$ and a point ,let $\mathbf{P} = \begin{pmatrix} 5 \\ 2 \\ -4 \end{pmatrix}$

so putting the values in the equation,

$$\begin{pmatrix} 2 \\ 3 \\ -1 \end{pmatrix}^T \begin{pmatrix} 5 \\ 2 \\ -4 \end{pmatrix} = c \quad (0.2)$$

$$\Rightarrow c = 10 + 6 + 4 = 20 \quad (0.3)$$

so the required equation is

$$(2 \ 3 \ -1) \mathbf{x} = 20 \quad (0.4)$$

Graph:
