Question:

Let $\mathbf{a}, \mathbf{b}, \mathbf{c}$ be unit vectors such that $\mathbf{a} + \mathbf{b} + \mathbf{c} = \mathbf{0}$. Which of the following are correct?

- 1) $\mathbf{a} \times \mathbf{b} = \mathbf{b} \times \mathbf{c} = \mathbf{c} \times \mathbf{a} = \mathbf{0}$
- 2) $\mathbf{a} \times \mathbf{b} = \mathbf{b} \times \mathbf{c} = \mathbf{c} \times \mathbf{a} \neq \mathbf{0}$
- 3) $\mathbf{a} \times \mathbf{b} = \mathbf{b} \times \mathbf{c} = \mathbf{a} \times \mathbf{c} \neq \mathbf{0}$
- 4) $\mathbf{a} \times \mathbf{b}, \mathbf{b} \times \mathbf{c}, \mathbf{c} \times \mathbf{a}$ are mutually perpendicular.

Solution:

Given:

$$\mathbf{a} + \mathbf{b} + \mathbf{c} = \mathbf{0} \quad (1)$$

$$\mathbf{c} = (\mathbf{a} \quad \mathbf{b}) \begin{pmatrix} -1 \\ -1 \end{pmatrix} \quad (2)$$

$$(3)$$

This \mathbf{c} lies in span of \mathbf{a}, \mathbf{b} .

Since $\mathbf{a}, \mathbf{b}, \mathbf{c}$ are all in 2D space, if all three are non-zero unit vectors satisfying this relation, they must be linearly dependent.

Therefore, the 2×2 matrix $(\mathbf{a} \quad \mathbf{b})$ cannot be invertible.

$$\left| (\mathbf{a} \quad \mathbf{b}) \right| = 0 \quad (4)$$

So the matrix is singular.

In 2D, norm is defined by the determinant:

$$\|\mathbf{a} \times \mathbf{b}\| = \left| (\mathbf{a} \quad \mathbf{b}) \right| \quad (5)$$

So if $\left| (\mathbf{a} \quad \mathbf{b}) \right| = 0$, then

$$\mathbf{a} \times \mathbf{b} = \mathbf{0} \quad (6)$$

Similarly, we can show the same for the vectors \mathbf{a} and \mathbf{b} .

Thus, the correct option is (1):

$$\mathbf{a} \times \mathbf{b} = \mathbf{b} \times \mathbf{c} = \mathbf{c} \times \mathbf{a} = \mathbf{0} \quad (7)$$
