Question:

Find the equation of the plane through the points

$$(2, 1, 0), \quad (3, -2, -2), \quad (3, 1, 7).$$

Solution: Given three points:

$$P_1(2, 1, 0), \quad P_2(3, -2, -2), \quad P_3(3, 1, 7)$$

The direction vectors are:

$$(v)_1 = (P_2 - P_1) = (3 - 2, -2 - 1, -2 - 0) = (1, -3, -2) \quad (1)$$

$$(v)_2 = (P_3 - P_1) = (3 - 2, 1 - 1, 7 - 0) = (1, 0, 7) \quad (2)$$

The normal vector to the plane is given by the cross product:

$$(n) = (v)_1 \times (v)_2 \quad (3)$$

$$(n) = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 1 & -3 & -2 \\ 1 & 0 & 7 \end{vmatrix} \quad (4)$$

$$(n) = (-21, -9, 3) = (-7, -3, 1) \quad (5)$$

Hence, the equation of the plane is:

$$-7(x - 2) - 3(y - 1) + (z - 0) = 0 \quad (6)$$

Simplifying:

$$-7x + 14 - 3y + 3 + z = 0 \quad (7)$$

$$7x + 3y - z - 17 = 0 \quad (8)$$

Final answer:

$7x + 3y - z - 17 = 0$
