2.10.23

Question:

The vector(s) which is/are coplanar with the vectors $\hat{i} + \hat{j} + 2\hat{k}$ and $\hat{i} + 2\hat{j} + \hat{k}$, and perpendicular to vector $\hat{i} + \hat{j} + \hat{k}$ is/are.

- a) $\hat{j} - \hat{k}$
- b) $\hat{i} + \hat{j}$
- c) $\hat{i} - \hat{j}$
- d) $\hat{j} + \hat{k}$

Variable	Vector
A	$\begin{pmatrix} 1 \\ 1 \\ 2 \end{pmatrix}$
B	$\begin{pmatrix} 1 \\ 2 \\ 1 \end{pmatrix}$
C	$\begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}$

Listing options as vectors D_i :

Input	Vector
D_1	$\begin{pmatrix} 0 \\ 1 \\ -1 \end{pmatrix}$
D_2	$\begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}$
D_3	$\begin{pmatrix} 1 \\ -1 \\ 0 \end{pmatrix}$
D_4	$\begin{pmatrix} 0 \\ 1 \\ 1 \end{pmatrix}$

Checking coplanarity

If the given vector D_i is coplanar with A and B :

$$[A \ B \ D_i] = 0 \iff [A \ B \ D_i]^2 = 0 \quad (1)$$

The determinant test via Gram matrix:

$$G_i = \begin{pmatrix} A^T A & A^T B & A^T D_i \\ B^T A & B^T B & B^T D_i \\ D_i^T A & D_i^T B & D_i^T D_i \end{pmatrix} \quad (2)$$

$$[A \ B \ D_i]^2 = \det(G_i) \quad (3)$$

Checking coplanarity for all four vectors:

Vector	$\det(G)$	Coplanar?
D_1	0	Yes
D_2	4	No
D_3	16	No
D_4	4	No

Checking perpendicular to C

If a given vector is perpendicular to C:

$$\mathbf{C}^T \mathbf{D}_i = 0 \quad (4)$$

$$\mathbf{C}^T = (1 \ 1 \ 1) \quad (5)$$

Vector	$\mathbf{C}^T \mathbf{D}_i$	Perpendicular?
\mathbf{D}_1	$(1 \ 1 \ 1) \begin{pmatrix} 0 \\ 1 \\ -1 \end{pmatrix} = 0$	Yes
\mathbf{D}_2	$(1 \ 1 \ 1) \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} = 3$	No
\mathbf{D}_3	$(1 \ 1 \ 1) \begin{pmatrix} 1 \\ -1 \\ 0 \end{pmatrix} = 0$	Yes
\mathbf{D}_4	$(1 \ 1 \ 1) \begin{pmatrix} 0 \\ 1 \\ 1 \end{pmatrix} = 2$	No
