Question

Find the length and the foot of perpendicular from the point $\left(1, \frac{3}{2}, 2\right)$ to the plane $2x - 2y + 4z + 5 = 0$.

Theoretical Solution

Given plane equation $2x - 2y + 4z + 5 = 0$ can be written as

$$\mathbf{n}^T \mathbf{x} = c \quad (1)$$

Where

$$\mathbf{n} = \begin{pmatrix} 2 \\ -2 \\ 4 \end{pmatrix} \text{ and } c = -5$$

Let the point be $\mathbf{p} \begin{pmatrix} 1 \\ \frac{3}{2} \\ 2 \end{pmatrix}$ and the point on the plane be x_o . The equation of the line joining \mathbf{p} and x_o is

$$x_o = \mathbf{p} + \lambda \mathbf{n} \quad (2)$$

Foot of Perpendicular

Multiply equation(2) on both sides by \mathbf{n}^\top

$$\mathbf{n}^\top (\mathbf{x}_o) = \mathbf{n}^\top (\mathbf{p} + \lambda \mathbf{n}) \quad (3)$$

$$\lambda = \frac{\mathbf{n}^\top \mathbf{x}_o}{\mathbf{n}^\top \mathbf{p} + \lambda \mathbf{n}^\top \mathbf{n}} \quad (4)$$

$$-5 = (2 \ -2 \ 4) \begin{pmatrix} 1 \\ \frac{3}{2} \\ 2 \end{pmatrix} + \lambda (2 \ -2 \ 4) \begin{pmatrix} 2 \\ -2 \\ 4 \end{pmatrix} \quad (5)$$

$$\lambda = -\frac{1}{2} \quad (6)$$

Foot of Perpendicular

Substitute the value of λ in equation(2) to get x_o

$$x_o = \begin{pmatrix} 0 \\ \frac{5}{2} \\ 0 \end{pmatrix} \quad (7)$$

$$\therefore \text{Foot of perpendicular is } x_o = \begin{pmatrix} 0 \\ \frac{5}{2} \\ 0 \end{pmatrix}$$

The length of point $\begin{pmatrix} 1 \\ \frac{3}{2} \\ 2 \end{pmatrix}$ to the plane $2x - 2y + 4z + 5 = 0$ is

$$\|x_o - p\| = \sqrt{(x_o - p)^T (x_o - p)} \quad (8)$$

$$= \sqrt{6} \quad (9)$$

$$\therefore \|x_o - p\| = \sqrt{6}$$

C code

```
#include <stdio.h>
#include <math.h>

void foot_and_length(double px, double py, double pz,
                    double a, double b, double c, double d,
                    double *x0, double *y0, double *z0, double *
                    dist) {
    // Normal vector n = (a, b, c)
    double numerator = a*px + b*py + c*pz + d;
    double denominator = a*a + b*b + c*c;
    double lambda = - numerator / denominator;

    *x0 = px + lambda * a;
    *y0 = py + lambda * b;
    *z0 = pz + lambda * c;

    *dist = fabs(numerator) / sqrt(denominator);
}
```

```
// For testing
int main() {
    double px = 1, py = 1.5, pz = 2;
    double a = 2, b = -2, c = 4, d = 5;
