Question

The angle between the planes

$$\mathbf{r} \cdot (2\hat{i} - 3\hat{j} + \hat{k}) = 1 \text{ and}$$

$$\mathbf{r} \cdot (\hat{i} - \hat{j}) = 4$$

Solution

Solution:

Let P_1 and P_2 are the planes given respectively.

The normal vector of the planes, say n_1 and n_2 are:

$$\mathbf{n}_1 = \begin{pmatrix} 2 \\ -3 \\ 1 \end{pmatrix} \quad (1)$$

$$\mathbf{n}_2 = \begin{pmatrix} 1 \\ -1 \\ 0 \end{pmatrix} \quad (2)$$

Thus, the cosine of the angle between the two is

$$\cos\theta = \frac{\mathbf{n}_1 \cdot \mathbf{n}_2}{|\mathbf{n}_1||\mathbf{n}_2|} \quad (3)$$

$$= \frac{5}{\sqrt{14} \times \sqrt{2}} = \frac{5}{\sqrt{28}} \quad (4)$$
