## Question:

The unit normal vector to the surface  $X^2 + Y^2 + Z^2 - 48 = 0$  at the point (4, 4, 4) is \_\_\_\_\_.

## Solution:

Let the surface be defined by the level set of a function  $f(\mathbf{x}) = 0$ .

$$f(X, Y, Z) = X^2 + Y^2 + Z^2 - 48 \quad (1)$$

The normal vector to the surface at any point is given by the gradient of the function,  $\nabla f$ .

$$\nabla f = \begin{pmatrix} \frac{\partial f}{\partial X} \\ \frac{\partial f}{\partial Y} \\ \frac{\partial f}{\partial Z} \end{pmatrix} = \begin{pmatrix} 2X \\ 2Y \\ 2Z \end{pmatrix} \quad (2)$$

Substituting

$$\mathbf{p} = \begin{pmatrix} 4 \\ 4 \\ 4 \end{pmatrix} \quad (3)$$

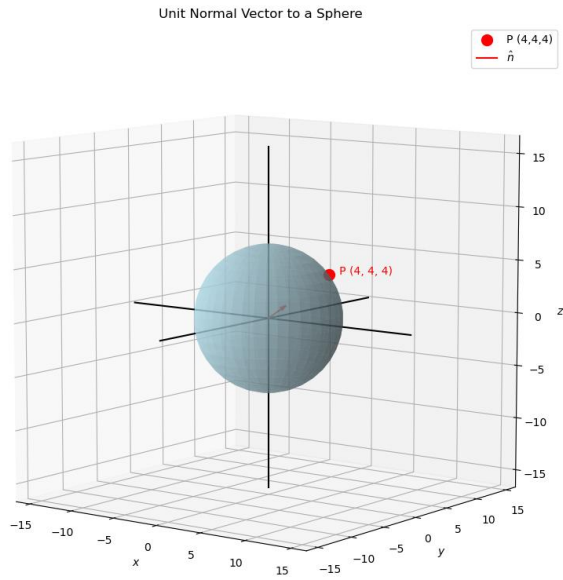

in (2)

$$\mathbf{n} = \nabla f(\mathbf{p}) = \begin{pmatrix} 2(4) \\ 2(4) \\ 2(4) \end{pmatrix} = \begin{pmatrix} 8 \\ 8 \\ 8 \end{pmatrix} \quad (4)$$

To find the unit normal vector  $\hat{\mathbf{n}}$ ,

$$\|\mathbf{n}\| = \sqrt{8^2 + 8^2 + 8^2} = \sqrt{3 \times 64} = 8\sqrt{3} \quad (5)$$

$$\hat{\mathbf{n}} = \frac{\mathbf{n}}{\|\mathbf{n}\|} = \frac{1}{8\sqrt{3}} \begin{pmatrix} 8 \\ 8 \\ 8 \end{pmatrix} = \frac{1}{\sqrt{3}} \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} \quad (6)$$
