Question:

Find the direction cosines of the line joining the points P(4, 3, -5) and Q(-2, 1, -8).

Solution:

The vector components of the given points are $\mathbf{P} \begin{pmatrix} 4 \\ 3 \\ -5 \end{pmatrix}$, $\mathbf{Q} \begin{pmatrix} -2 \\ 1 \\ -8 \end{pmatrix}$.

The unit vector in the direction of **PQ** is given as

$$\frac{\mathbf{Q} - \mathbf{P}}{\|\mathbf{Q} - \mathbf{P}\|}$$

$$\mathbf{Q} - \mathbf{P} = \begin{pmatrix} -6 \\ -2 \\ -3 \end{pmatrix} \tag{0.1}$$

$$\|\mathbf{Q} - \mathbf{P}\| = \sqrt{(-6)^2 + (-2)^2 + (-3)^2} = 7$$
 (0.2)

$$\frac{\mathbf{Q} - \mathbf{P}}{\|\mathbf{Q} - \mathbf{P}\|} = \frac{1}{7} \begin{pmatrix} -6 \\ -2 \\ -3 \end{pmatrix} \tag{0.3}$$

and the elements of the above vector are the direction cosines.
