Question 1.4.15

AI25BTECH11040 - Vivaan Parashar

September 2, 2025

1 Question:

The point which divides the line segment joining the points $\mathbf{P}(7, -6)$ and $\mathbf{Q}(3, 4)$ in the ratio 1:2 internally lies in which quadrant?

2 Solution:

The point ${\bf C}$ that divides points ${\bf P}$ and ${\bf Q}$ in the ratio l:m is

$$\mathbf{C} = \frac{m\mathbf{P} + l\mathbf{Q}}{l+m} \tag{1}$$

... The point **R** dividing **P** and **Q** in that ratio is $\mathbf{R} = \left(\frac{17}{3} - \frac{8}{3}\right)$ (2)

Clearly this point lies in the 4th quadrant.

3 Plot:
