#### **Ouestion**:

Find angle  $\theta$  between the vectors  $\mathbf{a} = \hat{i} + \hat{j} - \hat{k}$  and  $\mathbf{b} = \hat{i} - \hat{j} + \hat{k}$ .

### **Solution:**

Express vectors in column form:

$$\mathbf{a} = \begin{pmatrix} 1 \\ 1 \\ -1 \end{pmatrix}, \qquad \mathbf{b} = \begin{pmatrix} 1 \\ -1 \\ 1 \end{pmatrix}$$

The cosine of the angle  $\theta$  is given by:

$$\cos \theta = \frac{\mathbf{a} \cdot \mathbf{b}}{\|\mathbf{a}\| \|\mathbf{b}\|}$$

Compute dot product:

$$\mathbf{a} \cdot \mathbf{b} = (1)(1) + (1)(-1) + (-1)(1) = 1 - 1 - 1 = -1$$

Compute magnitudes:

$$\|\mathbf{a}\| = \sqrt{1^2 + 1^2 + (-1)^2} = \sqrt{3}$$
  
 $\|\mathbf{b}\| = \sqrt{1^2 + (-1)^2 + 1^2} = \sqrt{3}$ 

Substitute:

$$\cos \theta = \frac{-1}{\sqrt{3}\sqrt{3}} = -\frac{1}{3}$$
$$\theta = \cos^{-1}\left(-\frac{1}{3}\right)$$

#### **Answer:**

The required angle is:

$$\theta = \cos^{-1}\left(-\frac{1}{3}\right)$$
