Question:

Find the distance of the plane 2x - 3y + 4z - 6 = 0 from the origin.

Solution:

The distance of a plane Ax + By + Cz + D = 0 from a point (x_0, y_0, z_0) is given by:

Distance =
$$\frac{|Ax_0 + By_0 + Cz_0 + D|}{\sqrt{A^2 + B^2 + C^2}}$$
 (1)

For the plane

$$2x - 3y + 4z - 6 = 0 (2)$$

$$a = 2, b = -3, c = 4, d = -6$$

and the origin (0,0,0), we have:

Distance =
$$\frac{|2(0) - 3(0) + 4(0) - 6|}{\sqrt{2^2 + (-3)^2 + 4^2}} = \frac{|-6|}{\sqrt{4 + 9 + 16}} = \frac{6}{\sqrt{29}}$$
 (3)

Thus, the distance of the plane from the origin is

$$\frac{6}{\sqrt{29}} \tag{4}$$
