## **Question:**

Write the coordinates of a point **P** on the x-axis which is equidistant from points A(-2,0) and B(6,0).

Solution: Let

$$\mathbf{A} = \begin{pmatrix} a \\ 0 \end{pmatrix}, \quad \mathbf{B} = \begin{pmatrix} b \\ 0 \end{pmatrix}, \quad \mathbf{P} = \begin{pmatrix} p \\ 0 \end{pmatrix} \tag{1}$$

Since **P** is equidistant from **A** and **B**, their distances satisfy:

$$\|\mathbf{P} - \mathbf{A}\| = \|\mathbf{P} - \mathbf{B}\| \tag{2}$$

1

Square both sides:

$$\|\mathbf{P} - \mathbf{A}\|^2 = \|\mathbf{P} - \mathbf{B}\|^2 \tag{3}$$

Using the norm squared definition:

$$(\mathbf{P} - \mathbf{A})^{\top} (\mathbf{P} - \mathbf{A}) = (\mathbf{P} - \mathbf{B})^{\top} (\mathbf{P} - \mathbf{B})$$
(4)

Expand both sides:

$$\mathbf{P}^{\mathsf{T}}\mathbf{P} - 2\mathbf{A}^{\mathsf{T}}\mathbf{P} + \mathbf{A}^{\mathsf{T}}\mathbf{A} = \mathbf{P}^{\mathsf{T}}\mathbf{P} - 2\mathbf{B}^{\mathsf{T}}\mathbf{P} + \mathbf{B}^{\mathsf{T}}\mathbf{B}$$
 (5)

Cancel  $P^TP$  from both sides:

$$-2\mathbf{A}^{\mathsf{T}}\mathbf{P} + \mathbf{A}^{\mathsf{T}}\mathbf{A} = -2\mathbf{B}^{\mathsf{T}}\mathbf{P} + \mathbf{B}^{\mathsf{T}}\mathbf{B}$$
 (6)

Rearranged:

$$2(\mathbf{B} - \mathbf{A})^{\mathsf{T}} \mathbf{P} = \mathbf{B}^{\mathsf{T}} \mathbf{B} - \mathbf{A}^{\mathsf{T}} \mathbf{A} \tag{7}$$

Substitute the vectors:

$$2(b-a)p = b^2 - a^2 (8)$$

Rewrite right side as difference of squares:

$$2(b-a)p = (b-a)(b+a)$$
 (9)

Since  $b \neq a$ , divide both sides by (b - a):

$$2p = b + a \tag{10}$$

Solve for p:

$$p = \frac{a+b}{2} \tag{11}$$

Now substitute a = -2, b = 6:

$$p = \frac{-2+6}{2} = \frac{4}{2} = 2 \tag{12}$$

Hence, the coordinates of P are:

$$\mathbf{P} = \begin{pmatrix} 2 \\ 0 \end{pmatrix} \tag{13}$$
