4.10.10

Distance between 2 points

EE25BTECH11010 - Arsh Dhoke

Question

Find the distance of the point (-1, -5, -10) from the point of intersection of the line $\mathbf{r} = 2\mathbf{i} - \mathbf{j} - 2\mathbf{k} + \lambda(3\mathbf{i} + 4\mathbf{j} + 2\mathbf{k})$ and the plane $\mathbf{r} \cdot (\mathbf{i} - \mathbf{j} + \mathbf{k}) = 5$.

Input parameters

Description	Vector
Р	$\begin{pmatrix} -1 \\ -5 \\ -10 \end{pmatrix}$
a	$\begin{pmatrix} 2 \\ -1 \\ -2 \end{pmatrix}$
b	$\begin{pmatrix} 3 \\ 4 \\ 2 \end{pmatrix}$
n	$\begin{pmatrix} 1 \\ -1 \\ 1 \end{pmatrix}$

Intersection

At intersection:

$$\mathbf{n}^{T}(\mathbf{a} + \lambda \mathbf{b}) = c \tag{1}$$

$$\lambda = \frac{c - \mathbf{n}^T \mathbf{a}}{\mathbf{n}^T \mathbf{b}} \tag{2}$$

$$\mathbf{x} = \mathbf{a} + \left(\frac{c - \mathbf{n}^T \mathbf{a}}{\mathbf{n}^T \mathbf{b}}\right) \mathbf{b} \tag{3}$$

Computation

$$\mathbf{n}^{T}\mathbf{a} = \begin{pmatrix} 1 & -1 & 1 \end{pmatrix} \begin{pmatrix} 2 \\ -1 \\ -2 \end{pmatrix} = 1 \tag{4}$$

$$\mathbf{n}^{\mathsf{T}}\mathbf{b} = \begin{pmatrix} 1 & -1 & 1 \end{pmatrix} \begin{pmatrix} 3 \\ 4 \\ 2 \end{pmatrix} = 1 \tag{5}$$

$$\mathbf{x} = \begin{pmatrix} 2 \\ -1 \\ -2 \end{pmatrix} + \frac{(5-1)}{1} \begin{pmatrix} 3 \\ 4 \\ 2 \end{pmatrix} = \begin{pmatrix} 14 \\ 15 \\ 6 \end{pmatrix} \tag{6}$$

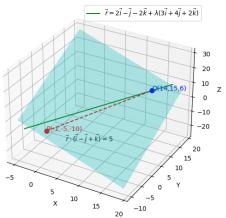

Distance

$$\|\mathbf{P} - \mathbf{x}\| = \sqrt{(14 - (-1))^2 + (15 - (-5))^2 + (6 - (-10))^2}$$
 (7)

$$=\sqrt{15^2+20^2+16^2}=\sqrt{881}\tag{8}$$

Graph

Line, Plane, and Distance between Points

C Code
