Question:

Equations of the diagonals of the square formed by the lines x = 0, y = 0, x = 1 and y = 1 are

Solution:

Let us solve the given equation theoretically and then verify the solution computationally.

According to the question,

The vertices of the square are,

$$\mathbf{a} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \quad \mathbf{b} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \quad \mathbf{c} = \begin{pmatrix} 1 \\ 1 \end{pmatrix} \quad \mathbf{d} = \begin{pmatrix} 0 \\ 1 \end{pmatrix}$$

To compute the equation of the diagnols , we can use the normal form of the equation, which is given by

$$\mathbf{n}^T \mathbf{x} = \mathbf{n}^T \mathbf{P}$$

where,

n-vector orthogonal to the direction vector

$$\mathbf{x} = \begin{pmatrix} x & y \end{pmatrix}^T$$

P=A point which lies along the vector

For diagnol $\mathbf{c} - \mathbf{a}$,

$$\mathbf{n} = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \mathbf{d}$$

where \mathbf{d} is the direction vector of diagonal.

$$\therefore \mathbf{n} = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \begin{pmatrix} \begin{pmatrix} 1 \\ 1 \end{pmatrix} - \begin{pmatrix} 0 \\ 0 \end{pmatrix} \end{pmatrix}$$

$$\implies \mathbf{n} = \begin{pmatrix} -1 \\ 1 \end{pmatrix}$$

$$\mathbf{n} = \begin{pmatrix} -1 \\ 1 \end{pmatrix} \quad and \quad \mathbf{P} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}$$

$$\therefore \begin{pmatrix} -1 & 1 \end{pmatrix} \begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} -1 & 1 \end{pmatrix} \begin{pmatrix} 1 \\ 1 \end{pmatrix} = 0$$

Similarly, for diagnol $\mathbf{d} - \mathbf{b}$,

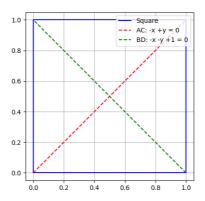

$$\therefore \mathbf{n} = \begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix} \begin{pmatrix} \begin{pmatrix} 0 \\ 1 \end{pmatrix} - \begin{pmatrix} 1 \\ 0 \end{pmatrix} \end{pmatrix}$$

$$\implies \mathbf{n} = \begin{pmatrix} -1 \\ -1 \end{pmatrix}$$

$$\mathbf{n} = \begin{pmatrix} -1 \\ -1 \end{pmatrix} \quad and \quad \mathbf{P} = \begin{pmatrix} 1 \\ 0 \end{pmatrix}$$

$$\therefore \begin{pmatrix} -1 & -1 \end{pmatrix} \begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} -1 & -1 \end{pmatrix} \begin{pmatrix} 1 \\ 0 \end{pmatrix} = -1$$

From the figure, it is clearly verified that the theoretical solution matches with the computational solution.

Plot of Square with diagonals
