Question:

Find the point at which the line y = x + 1 is a tangent to the curve $y^2 = 4x$. **Solution:** The given conic can be expressed as

$$\mathbf{x}^{\mathsf{T}}V\mathbf{x} + 2\mathbf{u}^{\mathsf{T}}\mathbf{x} + f = 0 \tag{1}$$

where

$$V = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix}, \quad \mathbf{u} = \begin{pmatrix} -2 \\ 0 \end{pmatrix}, \quad f = 0 \tag{2}$$

and $\mathbf{x} = \begin{pmatrix} x \\ y \end{pmatrix}$.

The given line is

$$y = x + 1 \tag{3}$$

which can be parameterized as

$$\mathbf{x} = \mathbf{h} + t\mathbf{m} \tag{4}$$

where

$$\mathbf{h} = \begin{pmatrix} 0 \\ 1 \end{pmatrix}, \quad \mathbf{m} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}. \tag{5}$$

Substituting $\mathbf{x} = \mathbf{h} + t\mathbf{m}$ in the conic equation,

$$(\mathbf{h} + t\mathbf{m})^{\mathsf{T}} V(\mathbf{h} + t\mathbf{m}) + 2\mathbf{u}^{\mathsf{T}} (\mathbf{h} + t\mathbf{m}) + f = 0$$
(6)

Expanding,

$$t^{2}(\mathbf{m}^{\mathsf{T}}V\mathbf{m}) + 2t(\mathbf{m}^{\mathsf{T}}V\mathbf{h} + \mathbf{u}^{\mathsf{T}}\mathbf{m}) + (\mathbf{h}^{\mathsf{T}}V\mathbf{h} + 2\mathbf{u}^{\mathsf{T}}\mathbf{h} + f) = 0$$
(7)

Compute each term:

$$\mathbf{m}^{\mathsf{T}}V\mathbf{m} = 1, \qquad \mathbf{m}^{\mathsf{T}}V\mathbf{h} = 1, \qquad \mathbf{u}^{\mathsf{T}}\mathbf{m} = -2,$$
 (8)

$$\mathbf{h}^{\mathsf{T}}V\mathbf{h} = 1, \qquad \qquad \mathbf{u}^{\mathsf{T}}\mathbf{h} = 0 \tag{9}$$

Substituting,

$$t^2 - 2t + 1 = 0 (10)$$

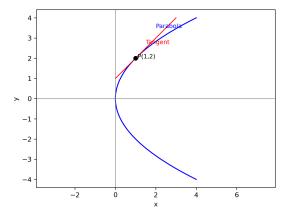

$$\Rightarrow (t-1)^2 = 0 \implies t = 1 \tag{11}$$

Hence, the point of contact is

$$\mathbf{q} = \mathbf{h} + t\mathbf{m} \tag{12}$$

$$\mathbf{q} = \begin{pmatrix} 1 \\ 2 \end{pmatrix}. \tag{13}$$
