## **Ouestion 2.10.15:**

The number of vectors of unit length perpendicular to vectors

$$\mathbf{a} = (1, 1, 0)$$
 and  $\mathbf{b} = (0, 1, 1)$  (1)

is

## **Solution:**

Given Solution: Let

$$\mathbf{a} = \begin{pmatrix} 1 \\ 1 \\ 0 \end{pmatrix}, \quad \mathbf{b} = \begin{pmatrix} 0 \\ 1 \\ 1 \end{pmatrix}, \quad \mathbf{x} = \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix}. \tag{3}$$

A vector **x** perpendicular to both **a** and **b** satisfies

$$\mathbf{a}^{\mathsf{T}}\mathbf{x} = 0 \quad \Rightarrow \quad x_1 + x_2 = 0,\tag{4}$$

$$\mathbf{b}^{\mathsf{T}}\mathbf{x} = 0 \quad \Rightarrow \quad x_2 + x_3 = 0. \tag{5}$$

$$x_1 = -x_2, x_3 = -x_2 \implies \mathbf{x} = x_2 \begin{pmatrix} -1 \\ 1 \\ -1 \end{pmatrix}.$$
 (6)

Thus a direction vector is

$$\mathbf{n} = \begin{pmatrix} -1\\1\\-1 \end{pmatrix}, \qquad ||\mathbf{n}|| = \sqrt{3}. \tag{7}$$

Hence the *unit* vectors perpendicular to both **a** and **b** are

$$\mathbf{u} = \pm \frac{1}{\sqrt{3}} \begin{pmatrix} -1\\1\\-1 \end{pmatrix}. \tag{8}$$

Therefore, the number of such unit vectors is  $\boxed{2}$ .
