Question:
The point $\mathbf{R}$ divides the line segment AB, where $\mathbf{A}(-4, 0)$ and $\mathbf{B}(0, 6)$ such that AR = $\frac{3}{4}$AB. Find the coordinates of $\mathbf{R}$.

Solution:

Variable	Description
x	x coordinate of P
y	y coordinate of P

TABLE 0: Variables Used

$$AR = \frac{3}{4}AB \implies \frac{AR}{RB} = 3 \tag{0.1}$$

$$\mathbf{R} = \frac{k(\mathbf{B}) + (\mathbf{A})}{k + 1} = \begin{pmatrix} x \\ y \end{pmatrix} \tag{0.2}$$

$$\tag{0.3}$$

Here according to problem value of k is 3

$$R = \frac{3B + A}{4} = \frac{3\begin{pmatrix} 0 \\ 6 \end{pmatrix} + \begin{pmatrix} -4 \\ 0 \end{pmatrix}}{4} = \frac{\begin{pmatrix} -4 \\ 18 \end{pmatrix}}{4} \tag{0.4}$$

$$\tag{0.5}$$

$$R = \begin{pmatrix} -1 \\ \frac{9}{2} \end{pmatrix} \tag{0.6}$$
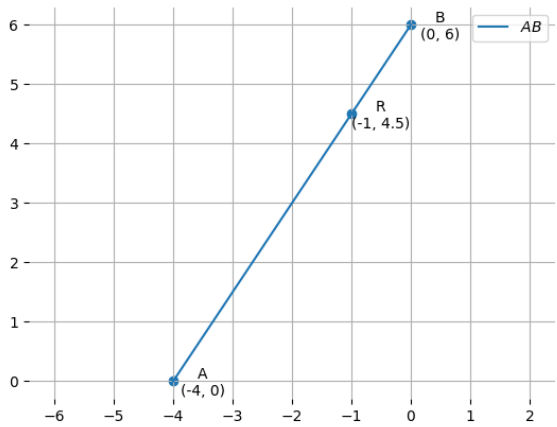

Hence the coordinates of $\mathbf{R}$ are $\left(-1, \frac{9}{2}\right)$
