Question: If the coordinates of the middle point of the portion of a line intercepted between the coordinate axes is $\begin{pmatrix} 3 \\ 2 \end{pmatrix}$, then the equation of the line will be?

Solution: The equation of line is

$$\mathbf{n}^\top \mathbf{x} = c \tag{0.1}$$

Where $\mathbf{n} = \begin{pmatrix} n_1 \\ n_2 \end{pmatrix}$ is the normal vector and $\mathbf{x} = \begin{pmatrix} x \\ y \end{pmatrix}$ is the position vector.

X-axis intercept

$$y = 0 \tag{0.2}$$

$$x = \frac{c}{n_1} \tag{0.3}$$

Thus, $\mathbf{A}$ is $\begin{pmatrix} \frac{c}{n_1} \\ 0 \end{pmatrix}$

Y-axis intercept

$$x = 0 \tag{0.4}$$

$$y = \frac{c}{n_2} \tag{0.5}$$

Thus, $\mathbf{B}$ is $\begin{pmatrix} 0 \\ \frac{c}{n_2} \end{pmatrix}$

Let $\mathbf{M}$ is the midpoint of $\mathbf{A}$ and $\mathbf{B}$
Given $\mathbf{M} = \begin{pmatrix} 3 \\ 2 \end{pmatrix}$.

$$\mathbf{M} = \frac{\mathbf{A} + \mathbf{B}}{2} \tag{0.6}$$

$$\begin{pmatrix} 3 \\ 2 \end{pmatrix} = \frac{1}{2} \begin{pmatrix} \frac{c}{n_1} \\ 0 \end{pmatrix} + \frac{1}{2} \begin{pmatrix} 0 \\ \frac{c}{n_2} \end{pmatrix} \tag{0.7}$$

$$\begin{pmatrix} 3 \\ 2 \end{pmatrix} = \begin{pmatrix} \frac{c}{2n_1} \\ \frac{c}{2n_2} \end{pmatrix} \tag{0.8}$$

$$\frac{c}{2n_1} = 3 \qquad (0.9)$$

$$\frac{c}{2n_2} = 2 \qquad (0.10)$$

$$\frac{n_1}{n_2} = \frac{2}{3} \qquad (0.11)$$

Let $n_1 = 2$ and $n_2 = 3$. Then

$$c = 6 \times 2 = 12 \qquad (0.12)$$

The final equation of the line is $\mathbf{n}^\top \mathbf{x} = c$

$$\begin{pmatrix} 2 & 3 \end{pmatrix} \begin{pmatrix} x \\ y \end{pmatrix} = 12 \qquad (0.13)$$
