Question:

Using elementary transformations, find inverse of the matrix $\begin{pmatrix} 2 & 1 \\ 7 & 4 \end{pmatrix}$ **Solution:**

TABLE I

A	$\begin{pmatrix} 2 & 1 \\ 7 & 4 \end{pmatrix}$
I	$\begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix}$

$$\mathbf{A}\mathbf{A}^{-1} = \mathbf{I} \tag{1}$$

Using Augmented matrix,

$$\left(\begin{array}{cc|cc} 2 & 1 & 1 & 0 \\ 7 & 4 & 0 & 1 \end{array} \right) \tag{2}$$

$R_2 = R_2 - 3R_1$

$$\left(\begin{array}{cc|cc} 2 & 1 & 1 & 0 \\ 1 & 1 & -3 & 1 \end{array} \right) \tag{3}$$

$R_1 = R_1 - R_2$

$$\left(\begin{array}{cc|cc} 1 & 0 & 4 & -1 \\ 1 & 1 & -3 & 1 \end{array} \right) \tag{4}$$

$R_2 = R_2 - R_1$

$$\left(\begin{array}{cc|cc} 1 & 0 & 4 & -1 \\ 0 & 1 & -7 & 2 \end{array} \right) \tag{5}$$

$$\mathbf{A}^{-1} = \begin{pmatrix} 4 & -1 \\ -7 & 2 \end{pmatrix} \tag{6}$$
